

## New mobile app gives 24/7 access to freight system

Suffolk freight forwarder Maritime Cargo Services (MCS) has enhanced its freight management system (MOATS) with a new mobile web app that offers clients 24/7 access to all container freight management information.

—1

Available from the MCS website, the mobile web app is compatible with all leading smartphones and tablets and, following a quick and secure log-in process, gives clients full and remote access to tracking information regarding all of their consignments simultaneously.

MCS managing director Rob Shelley said: "Clients still manage all of their freight management and tracking issues quickly and simply online through the MCS site but, once they've easily accessed our web app, they can now do it wherever and whenever they want from the homepage of their mobile device. The online, 'real-time' management and control of shipments has proved to be an enormous benefit to fresh produce importers and exporters." FPJ
